PROFILE

Third-year Computer Science student at Atria University who builds AI-powered systems end to end — graph ML and causal-inference models, FastAPI back ends and React front ends. Drawn to real-world problems in payments, healthcare and life sciences, and working toward becoming a software engineer who ships impactful products.

PROJECTS

TrustRail — Payment Intelligence System

Next.js · FastAPI · Scikit-learn · EconML · Prisma · SQLite

- Two-stage system that predicts intent risk to flag social-engineering payment fraud before money moves.
- Causal-inference (EconML) gateway routing that picks the payment gateway most likely to succeed per transaction.
- Dashboard simulation with model feedback loops and monitoring.

Drugos — AI-Powered Drug Discovery Platform

PyTorch Geometric · Graph Transformer · Reinforcement Learning · Neo4j · FastAPI · React

- Biomedical knowledge graph in Neo4j connecting diseases, proteins, drugs and their biological relationships.
- Graph-transformer link prediction to uncover drug–disease associations and rank drug candidates.
- Reinforcement-learning recommendations layered on the ranking; selected for the TiE Student Startup Program.

MedFlow AI — Hospital Supply Management Platform

React · FastAPI · PostgreSQL · Neo4j · OR-Tools · Machine Learning

- Multi-hospital inventory with FEFO (first-expiry, first-out) stock handling and demand forecasting.
- Procurement optimisation with OR-Tools, backed by supplier intelligence from a knowledge graph.
- AI operations assistant plus a data import and integrations layer.

Crop Disease Detection & Yield Loss Estimation

Python · Scikit-learn · XGBoost · PCA · Computer Vision

- Classifies crop diseases from leaf images using extracted image features compressed with PCA.
- Estimates yield loss with XGBoost on combined soil, weather and agricultural data.

EXPERIENCE

Intern — AU Venture Studio

EDUCATION

B.Tech, Computer Science

Atria University, Bengaluru

2024 – 2028 · AI/ML focus

Data Structures & Algorithms, OOP, Database Management, Web Development, AI & Machine Learning

SKILLS

Languages

Python, JavaScript, Java, SQL

AI / ML

PyTorch, PyTorch Geometric, Scikit-learn, XGBoost, EconML, Graph ML, Reinforcement Learning, Data Preprocessing

Web & Backend

React.js, Next.js, FastAPI, REST APIs, HTML, CSS

Databases

PostgreSQL, MySQL, MongoDB, SQLite, Neo4j

Tools

Git, GitHub, VS Code, Figma, OR-Tools, Prisma

ACHIEVEMENTS

TiE Student Startup Program

Selected with Team Cosmic for the Drugos startup project.

Hackathons

Competed in multiple hackathons building software and AI prototypes.

INTERESTS

AI-powered real-world applications, full-stack development, data science & analytics
